Elevator/Lowerator

Raise or Lower Containers With Ease

When significant elevation changes are required in your bottling line, our gripper elevators or lowerators are your best choice. Additionally, with the easy to turn hand wheel, line changeovers become easier and faster.

The gripper chain allows product to be conveyed gently as well as at the desired speed. No product damage occurs. These unique features are standard in each machine; yet each one is still entirely custom designed. Contact the FleetwoodGoldcoWyrd team and we will manufacture each elevator/lowerator to suit your specific line requirements.

Description of Operation

Containers enter the Elevator/Lowerator single file and in an up-right position. The dual gripper chain firmly, but gently, grasps the containers and turns them 90°. The containers are then elevated or lowered. The chain again turns the containers 90°, back to an up-right position. They are discharged single file onto the downstream conveyor.

Hand wheel (pictured above) ensures fast and easy line changeovers

| Specifications | |
|----------------------------|--|
| Frame | 2" square stainless steel or painted mild steel tubing |
| Chain | Rexnord LF1873SS-K3-3/4 GD |
| Drive | Constant speed gearmotor with VFD |
| Container Parameter | 2"-6" wide; 5"-13" high |
